

"From the first sales person I spoke to, to your superior technical support, your company and products are a joy to use!"

Gale C. Zeidman - Roslyn Consultants, LLC

PRINT AUDIT Secure

Documents left at the printer are a security risk, costly expense and environmental concern.

For organizations who want to eliminate stacks of unclaimed print jobs left at printers and increase document security, Secure is a print management service that is easy to install and use with no print queue modifications required.

Secure allows your users to release their print jobs at any device with their smartphone or a web-enabled computer.

PRINT AUDIT® SECURE eliminates the risk of prying eyes viewing confidential documents you print and increases your productivity by allowing you to release jobs at any printer you choose.

ENHANCE DOCUMENT SECURITY & REDUCE WASTE

- ▶ Eliminate aggravating wasted pages left at the printer -- saving your company money and reducing your environmental impact.
- ▶ Jobs are not printed until you are ready to pick them up at the device.
- ▶ Maintain compliance with HIPAA and Sarbanes Oxley by keeping confidential documents out of the wrong hands.

RELEASE JOBS FROM ANYWHERE

- ▶ Release your print job through any device with web access, including PC workstations, tablet PCs or even smartphones.
- ▶ Bypass printer line-ups or malfunctioning machines by simply walking to a different device on the network and releasing the job there instead.

Free 15-Day Trial Offer!

Contact us at **877-412-8348** or visit www.printaudit.com/freetrial to learn more.

TECHNICAL ADVANTAGES

Secure's Intelligent Print Routing System™ has no reliance on print servers, print queues or port monitoring, which means no modifications to your print environment.

Other technical benefits:

- ▶ Deploys easily to organizations of any size
- ▶ Authenticate users via Active Directory
- ▶ USB card reader support (Magnetic, proximity, etc.)
- ▶ Release jobs directly from Ricoh MFPs with Secure Embedded
- ▶ Works with Windows XP and up

HOW IT WORKS

1 User sends a print job to the printer.

2 Print job is placed into a virtual queue on a designated server.

3 User walks to printer and authenticates at a Secure Terminal or web enabled device.

4 Job is released and printed.
